

Movie Rating Prediction Project Report

Internship: CODSOFT

Task: Task 2 - Movie Rating Prediction

Objective: Develop a machine learning model to predict IMDb movie ratings.

Dataset: IMDb Movies India.csv

Tools Used: Python, Pandas, NumPy, Scikit-learn, VS Code.

Algorithm: Random Forest Regressor.

Workflow: Data loading, preprocessing, label encoding, numeric conversion, train-test split, model training and evaluation.

Evaluation Metrics: Mean Absolute Error (MAE), Mean Squared Error (MSE), and R^2 Score.

Conclusion: The model successfully predicts movie ratings from movie features and demonstrates a complete machine learning workflow.
